Product Description

Ariens Power Brush 28

The Ariens Power Brush 28 921076 is a professional-grade power broom designed for clearing light snow, slush, and debris from sidewalks, driveways, and paved surfaces. With a 28 inch clearing width, electric start, and self-propelled disc-drive transmission, this machine provides efficient finishing work and detail cleaning for residential and light commercial applications. The power brush removes light accumulations that occur between major snow events, maintaining clean, safe pavement surfaces without chemical de-icers.

Rotary Brush Technology for Complete Surface Cleaning

The Power Brush 28 uses a rotating brush cylinder that sweeps snow, slush, and debris from pavement with mechanical action that clears to bare pavement. The brush is particularly effective for clearing light, fluffy snow that falls overnight or accumulates during the day, as well as slush that forms from melting snow and ice. The sweeping action prevents refreezing by removing all moisture and loose material from pavement surfaces.

The brush handles snow accumulations that are too light for traditional snow blowers but still require removal for safe walkways and driveways. The mechanical sweeping action also removes leaves, dirt, and other debris, making the Power Brush useful for year-round pavement maintenance beyond winter snow clearing.

Self-Propelled Disc-Drive for Easy Operation

The Power Brush 28 features a disc-drive transmission that provides smooth, variable speed control for easy operation across different surface conditions. The self-propelled drive reduces operator effort and fatigue during extended use, making it easy to maintain consistent ground speed for optimal brush performance.

The 16 inch tires provide good traction on paved surfaces and moderate slopes, while the balanced weight distribution of 243 pounds ensures stable operation without requiring excessive operator effort to control the machine. The disc-drive system is known for durability and ease of adjustment, providing years of reliable service.

Electric Start and User-Friendly Features

The 120-volt electric start ensures reliable cold-weather starting with the push of a button. Simply plug in the machine and press the starter button for instant engine ignition, even in sub-zero temperatures. The electric start eliminates the physical effort and frustration of pull-cord starting in cold weather.

The Ariens AX engine provides reliable power for the rotating brush and drive system, delivering consistent

performance throughout the operating range. The engine is designed for easy cold-weather starting and dependable operation in winter conditions.

Ideal Width for Residential Applications

The 28 inch clearing width is optimized for residential sidewalks, driveways, and walkways. This width provides efficient coverage for standard residential applications while maintaining excellent maneuverability around obstacles and tight spaces. The compact width makes it easy to navigate along building edges, around parked vehicles, and through gates and narrow passages.

The machine dimensions of 65 inches long and 44 inches tall provide a manageable size for residential storage in garages and sheds while still delivering professional cleaning performance.

Durable Construction and Warranty

The Power Brush 28 is built with quality Ariens construction including a durable frame, reliable drive components, and a brush system designed for long service life. The machine is backed by a 3-year residential warranty and 90-day commercial warranty, providing confidence in the quality and durability of the equipment.

Ideal Applications

The Ariens Power Brush 28 921076 is ideal for homeowners who want to maintain clean, safe pavement surfaces throughout the winter season. This machine excels at clearing light snow and slush from driveways, sidewalks, patios, and walkways where appearance and safety are priorities. The Power Brush is also valuable for clearing leaves and debris in fall and spring, making it a versatile year-round pavement maintenance tool.
