Categories: Ariens, Ariens Snow

Product Description

Ariens Power Brush 36 Hydro

The Ariens Power Brush 36 Hydro 926096 is a professional-grade power broom featuring a 36 inch clearing width, hydrostatic transmission, and 12-volt electric start. This heavy-duty machine delivers maximum efficiency for clearing light snow, slush, and debris from large driveways, parking lots, and commercial properties. The hydrostatic drive provides infinitely variable speed control for precise operation, while the wide clearing path reduces the time and effort required to maintain clean, safe pavement surfaces.

Wide Clearing Path for Maximum Efficiency

The 36 inch clearing width allows operators to cover large areas quickly with fewer passes compared to narrower power brushes. This wide path is ideal for clearing expansive driveways, commercial parking lots, and large paved areas where productivity and efficiency are priorities. The extra width significantly reduces the time required to clear snow and debris from large properties.

Despite the wide clearing path, the Power Brush 36 Hydro maintains excellent maneuverability thanks to the hydrostatic transmission and balanced design. Operators can easily navigate around obstacles, make tight turns, and position the machine precisely for edge work and detail cleaning.

Hydrostatic Transmission for Superior Control

The hydrostatic transmission delivers smooth, infinitely variable speed control without the need to shift gears or adjust friction discs. Operators can match ground speed precisely to surface conditions and brush performance requirements, moving quickly through open areas or slowing down for detail work without losing power or traction.

The hydrostatic system provides excellent hill-holding capability and smooth forward and reverse operation, making it easy to maneuver on slopes and navigate around obstacles. The drive system is virtually maintenance-free and provides years of reliable, trouble-free operation. The hydrostatic transmission is a professional-grade feature that sets the Power Brush 36 Hydro apart from entry-level machines.

Professional Power and Reliability

The Ariens AX engine delivers reliable power for the rotating brush and hydrostatic drive system. The 12-volt electric start ensures dependable cold-weather starting without the physical effort of pull-cord systems. The battery-powered electric start works in all weather conditions, providing instant engine ignition for

professional operations.

The rotating brush cylinder sweeps snow, slush, leaves, and debris from pavement with mechanical action that clears to bare pavement without chemical treatments. The brush handles light snow accumulations, slush from melting snow, and general debris removal, making it a versatile tool for year-round property maintenance.

Heavy-Duty Construction for Commercial Use

The Power Brush 36 Hydro is built to professional standards with robust construction that handles frequent use in commercial applications. The machine measures 72 inches long and 43 inches tall, providing a substantial professional presence while maintaining manageable dimensions for transport and storage.

The 16 inch tires deliver excellent traction on paved surfaces and moderate slopes, while the professional-grade components throughout the machine ensure long-term durability and reliable performance. The Power Brush 36 Hydro is backed by a 3-year residential warranty and 1-year commercial warranty, reflecting Ariens confidence in the quality and durability of this professional-grade machine.

Ideal Applications

The Ariens Power Brush 36 Hydro 926096 is ideal for property managers, commercial operations, and homeowners with large properties who need efficient, professional-grade power broom performance. This machine excels in applications including large residential driveways, commercial parking lots, retail centers, office complexes, and any paved area where light snow, slush, and debris removal is required. The combination of wide clearing width, hydrostatic transmission, and professional construction makes the Power Brush 36 Hydro the top choice for operators who need maximum productivity and reliability.
