Product Description

Ariens Professional 28 Snow Blower

The Ariens Professional 28 Snow Blower 926093 combines professional-grade performance with homeowner-friendly operation, delivering powerful snow clearing capability for residential driveways and walkways. With a 28 In / 71.1cm clearing width, 420 cc Ariens AX engine, and Auto-Turn steering technology, this machine makes short work of winter storms while providing excellent maneuverability and control. This model represents the entry point into the Professional series, offering commercial-quality construction at a residential price point.

Professional Performance for Demanding Conditions

The Professional 28 is engineered to handle heavy snowfall and challenging conditions with confidence. The 420 cc Ariens AX® engine provides reliable starting in cold weather and delivers consistent power throughout the operating range. This engine size is shared with the larger Professional models, ensuring you have ample power reserves for the toughest snow conditions. The engine is paired with a robust two-stage snow removal system that uses a 16-inch steel serrated auger to break up packed snow and ice, feeding material into a high-speed three-blade steel impeller that throws snow up to 60 feet away.

The 28 In / 71.1cm clearing width strikes an excellent balance between coverage and maneuverability, allowing you to clear standard residential driveways quickly while still being able to navigate tight spaces and turn around in confined areas. The machine clears snow efficiently, handling everything from light powder to heavy, wet snow and compacted drifts. The larger auger diameter compared to Deluxe models provides improved snow intake and more aggressive cutting action.

Auto-Turn Steering for Effortless Maneuverability

One of the standout features of the Professional 28 is the Auto-Turn steering system, which makes maneuvering the machine remarkably easy. Auto-Turn allows you to steer the snow blower with minimal effort by simply squeezing the control lever on either handle. This reduces operator fatigue during extended use and makes it easy to navigate around obstacles, make tight turns, and position the machine precisely. The system disengages the drive wheel on one side, allowing the machine to pivot easily around the engaged wheel.

The Disc-O-matic transmission provides smooth, variable speed control with six forward speeds and two reverse speeds, allowing you to match your ground speed to snow conditions. Move quickly through light snow or slow down for heavy accumulation without losing power or traction. The disc-drive system is known for its durability and ease of adjustment, maintaining consistent performance throughout the life of the machine.

Professional Features and Construction

The Ariens Professional 28 is built to professional standards with heavy-duty components and durable construction. The auger housing is made from thick steel with a powder-coat finish that resists rust and corrosion. The machine includes LED headlights for early morning or evening snow clearing, heated hand grips for operator comfort in cold weather, and a quick-turn chute control system that allows you to adjust snow discharge direction quickly and easily.

The commercial-grade skid shoes protect the scraper bar and allow you to adjust the clearing height for different surfaces, while the cast iron gear case ensures long-term durability and reliable performance. The 16-inch directional snow tread tires provide excellent traction on paved surfaces and moderate inclines, maintaining positive drive even in slippery conditions.

Electric Start and User-Friendly Design

The Professional 28 features 120-volt electric start for reliable cold-weather starting. Simply plug in the machine, press the button, and the engine fires up quickly, even in sub-zero temperatures. The in-dash deflector control lever allows you to adjust the throwing distance without leaving the operator position, and the ergonomic handle design reduces fatigue during extended use.

The machine is designed for easy maintenance, with accessible grease points, a straightforward belt drive system, and serviceable components that can be replaced without specialized tools. The Professional series is engineered for longevity, with components designed to withstand years of heavy use.

Ideal Applications

The Ariens Professional 28 Snow Blower 926093 is ideal for homeowners with standard to large residential driveways, paved walkways, and properties that experience moderate to heavy snowfall. It is well-suited for clearing driveways, sidewalks, patios, and parking areas on paved surfaces and moderate slopes. The combination of professional-grade construction, Auto-Turn steering, and powerful snow clearing capability makes this machine an excellent choice for homeowners who demand reliability and performance from their equipment.
