Product Description

Ariens Professional 32 Snow Blower

The Ariens Professional 32 Snow Blower 926092 is a heavy-duty machine designed for homeowners and property managers who need to clear large driveways, long walkways, and expansive paved areas quickly and efficiently. With a massive 32 In / 81.3cm clearing width, 420 cc Ariens AX engine, and professional-grade construction, this snow blower delivers commercial-level performance in a residential package. This is the widest clearing path available in the Professional wheeled series, making it the ideal choice for properties with extra-wide driveways or multiple clearing areas.

Maximum Clearing Capacity for Large Properties

The 32 In / 81.3cm clearing width of the Professional 32 allows you to clear wide driveways and large paved areas in fewer passes, significantly reducing the time and effort required to clear snow after a storm. The extra-wide clearing path is matched by powerful snow processing capability, with the machine able to handle heavy, wet snow and deep accumulation with ease. This width represents the maximum clearing capacity for wheeled residential snow blowers, bridging the gap between standard homeowner models and commercial equipment.

The two-stage clearing system features a 16-inch steel serrated auger that breaks up compacted snow and ice, feeding material into a high-speed three-blade steel impeller. The impeller throws snow up to 60 feet away, placing it well clear of driveways and walkways. The machine handles everything from light, fluffy snow to heavy, wet snow and ice-crusting drifts without bogging down or clogging. The larger auger diameter provides superior snow intake compared to standard models, maintaining consistent performance even in the heaviest accumulation.

Ariens AX Engine and Disc-O-matic Drive

Powering the Professional 32 is the 420 cc Ariens AX® engine, engineered for reliable starting and consistent performance in cold weather. The engine delivers smooth, responsive power across the entire operating range, and the 120-volt electric start ensures first-try starting even in sub-zero temperatures. This engine provides ample power reserves for the wide clearing path, ensuring consistent performance even when processing heavy, wet snow loads.

The Disc-O-matic transmission provides smooth, variable speed control with six forward speeds and two reverse speeds. The disc-drive system is known for its durability and ease of adjustment, allowing you to fine-tune the drive speed to match snow conditions and terrain. The transmission delivers positive traction and

excellent hill-holding capability on paved surfaces and moderate slopes. The wide range of speeds allows you to move quickly through light snow or slow down for heavy accumulation without compromising control or power delivery.

Auto-Turn Steering and Professional Features

The Professional 32 is equipped with Auto-Turn steering technology, which makes maneuvering this large machine surprisingly easy. Auto-Turn allows you to steer the snow blower with minimal effort by squeezing the control lever on either handle, reducing operator fatigue and making it easy to navigate around obstacles and make tight turns. This feature is particularly valuable on the 32-inch model, as it eliminates the physical strain typically associated with maneuvering extra-wide snow blowers.

The machine includes LED headlights for early morning or evening work, heated hand grips for operator comfort, and a quick-turn chute control system for fast, easy adjustment of snow discharge direction. The in-dash deflector control lever allows you to change the throwing distance without leaving the operator position, keeping you focused on clearing snow rather than adjusting controls.

Heavy-Duty Construction and Durability

The Ariens Professional 32 is built to withstand years of heavy use with minimal maintenance. The auger housing is constructed from extra-thick steel with a durable powder-coat finish that resists rust and corrosion. The cast iron gear case is designed for long-term durability and reliable performance, and the commercial-grade skid shoes protect the scraper bar while allowing you to adjust the clearing height for different surfaces.

The 16-inch directional snow tread tires provide excellent traction on paved surfaces, maintaining positive drive even in slippery conditions. The entire machine is designed for easy maintenance with accessible grease points and serviceable components that can be replaced without specialized tools.

Ideal Applications

The Ariens Professional 32 Snow Blower 926092 is designed for homeowners with large driveways, long paved walkways, and expansive properties that require fast, efficient snow clearing. It is also well-suited for small commercial applications such as clearing parking lots, business walkways, and multi-unit residential properties. The combination of wide clearing capacity, professional-grade construction, and user-friendly features makes this machine an excellent choice for anyone who needs to move large volumes of snow quickly and reliably.
