Product Description

EGO Commercial Commercial Power Head

The EGO Commercial Commercial Power Head (PHX1600) provides professional landscaping crews with a versatile power source that drives multiple commercial-grade attachments. This commercial multi-head system powerhead delivers the high torque and sustained power needed for demanding professional applications while offering the flexibility to switch between trimming, edging, pruning, and other tasks using a single power source and battery platform.

Professional Multi-Head System

Engineered for commercial operations seeking maximum versatility and equipment investment efficiency, this powerhead serves as the foundation for a complete attachment-based tool system. Professional crews can carry one powerhead and multiple attachments rather than separate complete tools, reducing truck storage requirements and simplifying equipment management.

High-Performance Motor Design

The commercial-grade brushless motor delivers consistent torque across the full range of compatible attachments. Whether driving trimmer heads, edger blades, hedge trimmer units, or pole saw attachments, the motor maintains performance under demanding commercial loads. Advanced motor cooling ensures sustained operation during extended work periods without thermal limiting.

Quick-Connect Attachment System

- Tool-free attachment changes allow rapid switching between tasks in the field
- Secure locking mechanism ensures attachment stability during demanding use
- Sealed connection protects drive shaft from dirt and moisture intrusion
- Universal mounting accepts the full range of EGO commercial attachments
- Ergonomic design accommodates various attachment configurations

Commercial Construction Quality

Built for the rigors of daily professional use, this powerhead features heavy-duty shaft construction and impact-resistant housing that withstand the demanding conditions of commercial landscaping operations. Weather-resistant components allow operation in various conditions, giving crews flexibility when weather is less than ideal.

Operator Comfort Features

Designed for extended use by professional operators, the powerhead incorporates anti-vibration technology and ergonomic handle design that reduce fatigue during long work sessions. The well-balanced design works effectively with various attachments, maintaining comfortable operation regardless of which attachment is mounted.

Battery System Flexibility

Compatible with all EGO 56V ARC Lithium batteries, commercial crews can customize battery capacity to match specific job requirements and attachment power demands. Higher torque attachments like brush cutters and pole saws benefit from larger capacity batteries, while lighter attachments like trimmers work efficiently with smaller batteries that reduce overall system weight.

Fleet Efficiency Benefits

For commercial operations, the multi-head system reduces total equipment investment compared to purchasing multiple dedicated tools. Maintenance is simplified with fewer motors and drive systems to service. Battery investments are maximized since all attachments share the same power platform. Storage and transport requirements are reduced compared to carrying multiple complete tools.

Attachment Ecosystem

The EGO Commercial attachment ecosystem includes trimmer heads, edgers, hedge trimmers, pole saws, cultivators, and specialized attachments for various professional landscaping tasks. This comprehensive attachment selection allows crews to handle diverse job requirements with a single powerhead investment.

Reduced Noise and Emissions

The battery-powered design operates at significantly lower noise levels than gas-powered multi-head systems, allowing crews to work in noise-sensitive residential areas and restricted zones. Zero direct emissions ensure compliance with environmental regulations in all jurisdictions while supporting corporate sustainability initiatives.

Professional Warranty Support

Backed by EGO's commercial warranty program designed for professional use applications, this powerhead is supported by a network of dealers and service centers that provide access to parts and service, ensuring minimal downtime when equipment requires attention.
